“Strategic Plan Development for the Palestinian Ministry of Transportation” implemented by ARD Inc. Civic Engagement Program (CEP)

This is a first strategy document to the Ministry of Transport, an advanced step towards changing the course of the Ministry towards strengthening the supervisory, the planning and monitoring role of this important sector. The methodology reviewed all documents, reports and previous operational plans, and held intensive meetings with the leaderships represented by the Minister and the Ministry deputy assistants and deputies, and a number of general managers as well as the Strategic Planning Committee, in addition to the central workshop held with the participation of more than 30 people, which contributed effectively in a high dynamic access to this document.

It also contained a document on the most important values and guiding principles for the work of the Ministry, whether internally or with partners and citizens, which can be summarized with one sentence which is a significant expression: **“Partners in resolution, partners in responsibility and partners in development”**. This is how the Ministry considers the pattern of culture and the relationship that must prevail within the Ministry and with partners and citizens at all levels.
